

Jamieson Equipment Company, Inc.

FEATURE PRODUCT

The Model RSC is small stop switch, approximately 5" x 4", that provides a positive shut off of conveyors or any dangerous equipment in an emergency. Machine and conveyor operators can pull the extended cable or push the palm stop button to actuate this control.

The Model RSC is available in four different configurations. Single ended, single ended with cable break detection, double ended with cable break detection, or palm stop button only.

The output contacts of the Model RSC can control up to two separate circuits, one for machinery shutdown and one for an alarm. Two versions of the Model RSC have the built-in advantage of cable break detection. Another version acts as a standard cable pull switch, while a fourth version is a palm button (only) for punch presses and other indoor equipment.
